

Space Rider Helmet

A Hyper Nomadic Creativity Enhancement Shelter, Deployed Multi-Dimensionally

A Brief Explanation of Space Rider Helmet development and functionality:

This Space Rider Helmet is the product of a unique collaboration between Space Rider's Ati Maier, and ONEPIECPANTS's Bruce Busby. Its development took into consideration Space Rider's creatively regenerative wanderings, with an emphasis on enabling constant adaptation toward future unfamiliar territory, and the implied dangers and discoveries that lie therein.

The key to the Space Rider Helmet producing such an expansive hyper nomadic creativity enhancing environment stems from a concentrated focus on simultaneously applying the multidimensional aspect of hyper nomadic creativity enhancement towards both Panoramic Unification, as well as towards Local Tight Cluster Agitation. Panoramic Unification, broadly deployed, draws together lost or wandering Creativity Amplification Quakes (CRAQUE's). Conversely, Local Tight Cluster Agitation is critical for directionally dispersing dense gatherings of Creativity Impairment Plumes (CRIMP's) to encourage spontaneous reconfiguration. The simultaneous action of both unifying and agitating draws CRAQUE's and CRIMP's together for reconfiguration into a sustained and continuous post-neo-avant-guard renaissance of creative discovery.

A dual core system drives this simultaneous creative reconfiguration. The Creativity Unification Pump (CRUMP) draws CRIMP's, CRAQUE's and other unfamiliar clusters of creativity limiting particles towards the Space Rider Helmet, and the Creativity Oscillation Mill (CROM) chops them up, mixes them around, puts them back together again, and spits them out. During the final instance of reintroduction, the ONPIECEPANTS Directional Filter Nozzle distributes these reconfigured particles as continuously circulating creatively receptive clouds, and insures their availability for expansive creative discovery by Space Rider.

Every effort was made to allow sub-momentary reconfiguration and instantaneous acceptance of known and unknown gatherings of creativity limiting particles and forces.

Thanks to Space Rider for inspiring ongoing exploration by all!

Bruce Busby, 11/08/16
